

# How Can Office Window Tinting Benefit Your Workplace?

U.S. Film Crew Article (Page 1 of 2)

## There are many ways you can improve your workplace; from new furniture and equipment to even a brand new interior design.

There is one often-overlooked way of improving your workspace—office window tinting.

Window tinting involves putting a layer of window film over your office windows. There are various kinds of films that specialize in giving your workplace a range of benefits and in this article, we'll take a look at some of the ways tinting can help improve your workplace.

### Your products are protected from potential sun damage

Despite its many benefits, the sun can cause a considerable amount of damage to objects, and this could include your merchandise.

Products like furniture and upholstery will start to fade when with constant exposure to sunlight; this happens when the chemicals used to give these products their colors start to break down. Naturally, customers will not want to buy a product with obvious sun damage.

Window films are designed to reflect or filter the harsh rays of the sun and this can help keep your products safe from fading.

Another advantage of window film is that it can make the indoor climate favorable for certain products that can be damaged by sunlight and heat, this way you won't need to invest in creating a separate space in your office for storing these products.

### You can get more natural light

When the sun starts to warm up your office, the usual thing to do is to close your windows with blinds and curtains and block out the heat and sunlight; this will lead to more frequent use of indoor lighting in your workplace, driving up electricity consumption.

With office window tinting, you can allow natural light into your office without blocking out sunlight completely and keep the heat levels in the office relatively low at the same time. The tinting also blocks out most of the harmful UV radiation that comes with sunlight, and can also reduce glare.

Window films are designed to reflect or filter the harsh rays of the sun and this can help keep your products safe from fading.

Since you'll be allowing natural light in, you won't have to waste electricity on indoor lighting during the day.

More natural light can also act as a mood-booster for employees, likely improving productivity.

## You can lower maintenance costs

Sunlight will make your office interior very warm and this could make your HVAC work overtime. The HVAC is designed to keep your office's climate comfortable, but like any other machine, it has its limits.

When your HVAC runs constantly, it's more likely to break down more often. This expensive necessity in your workplace could result in added costs with repairs and maintenance that will put a dent in your company's wallet.

Fortunately, window films such as solar film can help reduce the intensity of the sunlight entering your building, keeping your office cool, and putting less pressure on your HVAC.

## You can give your clients some privacy

Sometimes your clients may want some privacy when discussing important business matters. In a typical office setting, some clients may not feel comfortable when people out on the street can see them.

If your workplace is somewhere that clients may want to feel safe or maintain privacy, office window tinting is an ideal option for you.

Many window films can give your office windows a dark tint which makes it hard for anyone from the outside to see into your office. Films like the one-way variety can allow your clients to see what's going on outside while protecting them from prying eyes.

For some added security for your clients, you might want to consider installing specialty window films like switchable smart glass.
